

## Downloading Digital Images

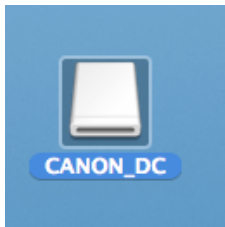

You finally had your digital camera ready at the right time and got some great shots of your students. Now what?

Downloading your images is easy. There are two ways to do it:

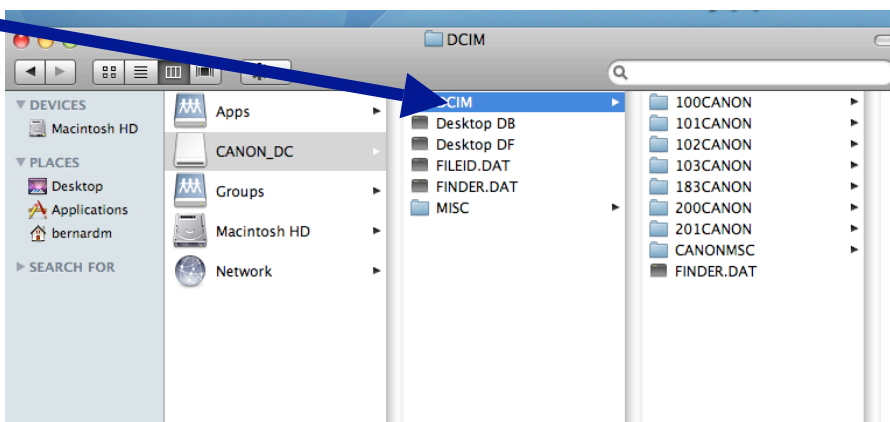

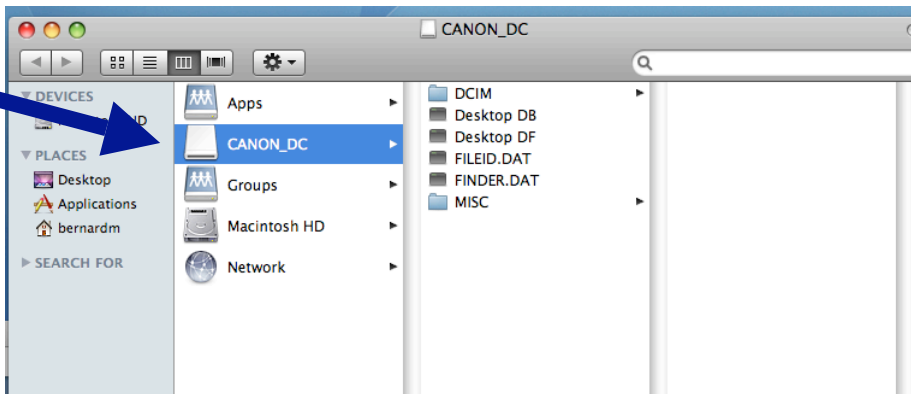

1. Connect your camera to the computer using the USB cord provided with the camera.

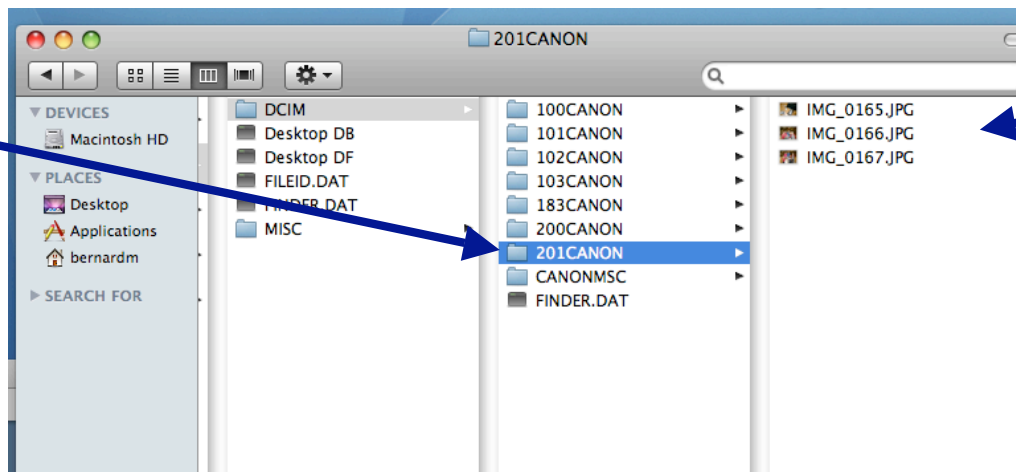

OR

2. Connect the card reader to your computer. Insert the camera's memory card. You'll see an icon like this on your desktop:

Double Click to open.

Choose the picture you want, double click to open it and File>Save as with a name. (Leave the .jpg suffix.)

If you haven't already done so, create a new folder to hold your photos.

File> New Folder and then click once on the title to rename it.

Remember: when you are done downloading, drag the device to the trash can to safely eject it.
